Dear Sir or Madam,

I am a computer engineering graduate from Bandırma Onyedi Eylül University. I finished my education as the top student in the engineering faculty. I also studied one semester in Poland with the Erasmus+ Student Exchange Program, where I gained academic and cultural experience. I am writing this letter to apply for the Software Developer position.

During my education, I always worked in a disciplined way, enjoyed learning, and took responsibility. These helped me to improve myself both technically and personally. I mostly worked on backend development projects and improved my skills with professional internships. Sometimes I also did basic frontend work, but my main focus is backend. I used Java Spring Boot, PHP, and .NET technologies. I worked with PostgreSQL, MySQL, MS SQL, and MongoDB databases. I also gained experience with Docker and Git for project setup and version control. In my last job, I worked on a corporate CRM project with microservice architecture using Java Spring Boot.

My career goal is to become a software developer who follows technology closely, always learns, and adds value to the company by working on innovative projects. I believe I can contribute to your team with my technical skills, problem-solving mindset, analytical thinking, and communication abilities.

Thank you for your time.

Best regards,
Berkant Karaca
